

1. Print this page on a card paper (Cartridge sheet or any thick paper).
2. Cut the design of specs using scissors or blade.
3. Fold on blue lines. Put a Red and Blue transparent color plastic or cellophane sheet for each eye. (ensure Red on left eye and Blue on right eye) and stick the frame using glue.
4. Now look at the special 3D pictures given on next pages. You should be able to see depth in these pictures. Can you see the mouth of the canon popping out of the paper (or screen)?
5. Search for more "Red Blue 3D images" on google.
6. Post your pictures of this project on  or  and tag @ilovescience.in or send me your pictures and feedback at ilovescience.in@gmail.com 😊
