

Blow spinner

Cut out one of the circles using a pair of scissors. Then cut the 8 solid lines as marked. Remember not to cut the dotted lines. Now fold triangles up from the dotted lines. Put the metal thumb pin in your kit at the bottom side of the card.

When you put the circular card on a flat surface and blow on it from the top (use your mouth, or blow through a straw), your spinner will start spinning. This happens because the air puts pressure on the card through the folded triangles.
